

# Barclays ETN+ S&P VEQTOR™ ETN

The Barclays ETN+ S&P VEQTOR<sup>TM</sup> ETNs (the ETNs) are linked to the performance of the S&P 500® Dynamic VEQTOR<sup>TM</sup> Total Return Index (the Index). The ETNs are riskier than ordinary unsecured debt securities and have no principal protection. The ETNs are unsecured debt obligations of the issuer, Barclays Bank PLC, and are not, either directly or indirectly, an obligation of or guaranteed by any third party. Any payment to be made on the ETNs, including any payment at maturity or upon redemption, depends on the ability of Barclays Bank PLC to satisfy its obligations as they come due. The ETNs are exposed to any decrease in the level of the Index between the inception date and the applicable valuation date. If the level of the Index decreases or does not increase sufficiently to offset any negative effect of the investor fee, you may receive less than your original investment in the ETNs at maturity or upon early redemption. An investment in the ETNs involves significant risks, including possible loss of principal, and may not be suitable for all investors.

The Index seeks to provide investors with broad equity market exposure with an implied volatility hedge by dynamically allocating its notional investments among three components: equity, volatility and cash. The equity component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component of the Index is represented by the S&P  $500^{\circ}$  Total Return Index<sup>TM</sup> and the volatility component index is represented by the S&P  $500^{\circ}$  Total Return Index Index

Maturity Date	September 08, 2020

## Market Indicators (as of 11/30/2018)

Closing Indicative Note Value	\$162.47
Market Capitalization <sup>3</sup>	\$21,582,677
ETNs outstanding	132,841

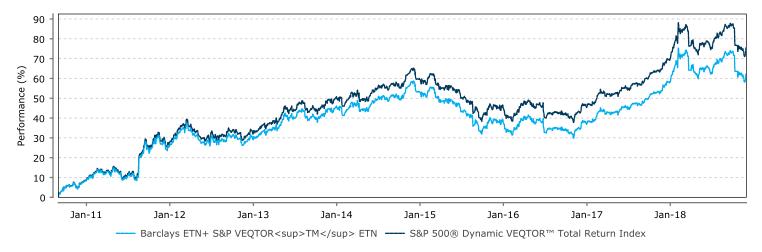

The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investment, when sold or redeemed may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. See additional information below for how return figures are calculated. PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS

1. Intraday Indicative Value. The "intraday indicative value" meant to approximate the value of the ETNs during the current trading day by reference to the underlying index is calculated and published during the course of each trading day. The intraday indicative value is intended to provide investors with an approximation of the effect that intraday changes in the level of the underlying index would have on the closing indicative value of the ETNs. The intraday indicative value only reflects the accrued investor fee and other applicable costs at the close of business on the preceding day, but does not include any adjustment for the investor fee or applicable costs accruing during the course of the current day. For more information on how the intraday indicative value is calculated, please see the section "Valuation of the ETNs" in the prospectus relating to the ETNs.

The intraday indicative value is provided for reference purposes only. It is not intended as a price or quotation, or as an offer or solicitation for the purchase, sale, redemption or termination of the ETNs, nor does it reflect hedging or transaction costs, credit considerations, market liquidity, or bid-offer spreads. Published index levels from the sponsors of the indices underlying the ETNs may occasionally be subject to delay or postponement. Any such delays or postponements will affect the level of the index and therefore the intraday indicative value of the ETNs. Index levels provided by the sponsors of the indices underlying the ETNs do not necessarily reflect the depth and liquidity of the underlying markets for the index components. For this reason and others, the actual trading price of the ETNs may be different from their intraday indicative value.

- 2. The investor fee rate per ETN is 0.95% per year. The investor fee on the inception date was zero. On each subsequent calendar day until maturity or early redemption, the investor fee will be equal to (1) the investor fee rate *times* (2) the closing indicative note value on the immediately preceding calendar day *times* (3) the daily index factor on that day (or, if such day is not an index business day, one) *divided by* (4) 365. The daily index factor on any index business day will equal (1) the closing level of the Index on such index business day divided by (2) the closing level of the Index on the immediately preceding index business day.
  - 3. Market Capitalization = Closing Indicative Note Value x ETNs Outstanding.

## ETN and Index Historical Performance

#### Index Returns

Index returns show the change in the level of the index underlying the ETNs over the relevant period, expressed as a percentage. Index returns are calculated using the closing index level from the beginning of the relevant period to the end of the relevant period. For any historical period of one year or longer, index returns are shown on an annualized basis. Index returns are for illustrative purposes only and do not represent actual ETN performance. Index returns do not reflect any management fees, transaction costs, or expenses which would reduce your actual return, including the investor fee and applicable costs of the ETNs. Indexes are unmanaged and one cannot invest directly in an index.

#### ETN Closing Indicative Note Value Returns

ETN closing indicative note value returns show the change in the closing indicative value of the ETNs over the relevant period, expressed as a percentage. For any historical period of one year or longer, closing indicative note value returns are shown on an annualized basis. The closing indicative note value of an ETN is an amount per ETN calculated on each valuation date that reflects the change in value of the ETN from the previous valuation date due to the daily change in the index level and the daily accrual of the investor fee and other applicable costs. The closing indicative note value of an ETN may differ from the actual trading price of the ETN at any time due to hedging or transaction costs, credit considerations, market liquidity, bid-offer spreads or other factors affecting the trading price of the ETN. For more information on how the closing indicative note value is calculated, please see the section "Specific Terms of the ETNs" in the prospectus relating to the ETNs.

#### **ETN Market Price Returns**

ETN Market price returns show the change in the end-of-day trading price of the ETNs on the exchange over the relevant period, expressed as a percentage. Market price returns are calculated using the midpoint of the bid/ask spread at 4:00 pm Eastern time (or the last midpoint of the bid/ask spread prior to 4:00 pm Eastern time) from the beginning of the relevant period to the end of the relevant period. For any historical period of one year or longer, market price returns are shown on an annualized basis. Market price returns do not represent the returns you would receive if you traded at a price or at a time on the exchange other than as described in this section. Market price returns do not account for brokerage commissions, which will reduce actual returns, and may not include the effect of any applicable fees and costs on the ETNs.

In the event that there is an absence of a bid/ask value at 4PM on the relevant month end, N/A will be displayed in place of a percentage value for ETN Market Price Returns.

## Correlations (as of 11/30/2018)

Index	Correlation*†
S&P 500® Dynamic VEQTOR™ Total Return Index	1.00
S&P 500® Total Return Index	.78
MSCI EAFE® Net Total Return Index	.60
MSCI Emerging Markets Net Total Return Index	.54
Bloomberg Commodity Index Total Return <sup>SM</sup>	.20
Barclays US Aggregate Bond Index	14

Index correlations are for illustrative purposes only and do not represent actual ETN performance. PAST PERFORMANCE IS NOT INDICATIVE FOR FUTURE RESULTS.

- The S&P 500<sup>®</sup> Index is intended to provide an indication of the pattern of stock price movement in the U.S. equities market.
- The Bloomberg Commodity Index Total Return<sup>SM</sup> reflects the returns that are potentially available through an unleveraged investment in the futures contracts on physical commodities comprising the index plus the rate of interest that could be earned on cash collateral invested in specified Treasury Bills.
- The MSCI EAFE Index is an equity index which captures large and mid cap representation across Developed Markets countries around the world, excluding the US and Canada
  - The MSCI Emerging Markets Index<sup>SM</sup> captures large and mid cap representation across 21 Emerging Markets countries.
  - The Barclays U.S. Aggregate Bond Index provides a measure of the performance of the U.S. investment grade bonds market.

### Index Composition (as of 11/30/2018)

Index Components	Weightings %
S&P 500 <sup>®</sup> Total Return index	90.00%
S&P 500 VIX Short-Term Futures <sup>TM</sup> Index	10.00%
Cash	.00%

Source: Barclays, subject to change.

Weights of the underlying futures contracts in the Index expressed as a percentage of the total absolute dollar exposure of the portfolio.

<sup>\*</sup> Correlation is a term used to describe the statistical relationship between two or more quantities or variables. Perfectly correlated assets will have a correlation coefficient of one, while the correlation coefficient will be zero when returns on two assets are completely independent.

### Selected Risk Considerations

An investment in the Barclays ETNs described herein (the "ETNs") involves significant risks, including possible loss of principal, and may not be suitable for all investors. Selected risks are summarized here, but we urge you to read the more detailed explanation of risks described under "Risk Factors" in the applicable prospectus supplement and pricing supplement.

You May Lose Some or All of Your Principal: The ETNs are exposed to any change in the level of the Index caused by any daily increase or decrease in the level of the Index. Additionally, if the level of the Index is insufficient to offset the negative effect of the investor fee, you will lose some or all of your investment at maturity or upon redemption, even if the value of the Index has increased. The ETNs are riskier than ordinary unsecured debt securities and have no principal protection.

Credit of Barclays Bank PLC: The ETNs are unsecured debt obligations of the issuer, Barclays Bank PLC, and are not, either directly or indirectly, an obligation of or guaranteed by any third party. Any payment to be made on the ETNs, including any payment at maturity or upon redemption, depends on the ability of Barclays Bank PLC to satisfy its obligations as they come due. As a result, the actual and perceived creditworthiness of Barclays Bank PLC will affect the market value, if any, of the ETNs prior to maturity or redemption. In addition, in the event Barclays Bank PLC were to default on its obligations, you may not receive any amounts owed to you under the terms of the ETNs.

Past Performance Is Not Indicative of Future Results: It is impossible to predict whether any Index underlying your ETNs will rise or fall. The actual performance of the Index underlying your ETNs or any index component over the term of the respective series of the ETNs, as well as the amount payable at maturity or upon redemption, may bear little relation to the historical levels of comparable indices, which in most cases have been highly volatile.

**Dynamic Allocation Risk:** The value of the Index will depend upon the success of the Index in dynamically allocating between the equity and volatility components. The allocation of the Index to the equity and volatility components is based on realized volatility and implied volatility measurements that may not effectively predict trends in future volatility, and is made in accordance with pre-defined weightings that may not be optimal.

The Stop Loss Feature of the Index Does Not Ensure That Losses Are Limited to 2%: The stop loss feature is designed to mitigate against losses in the Index by moving the Index into a 100% cash position if the S&P 500® Dynamic VEQTOR Excess Return Index has lost 2% or more of its value over any five consecutive index business day period. Because the value of the Index may, for instance, decline more than 2% over a five consecutive business day period prior to the occurrence of the stop loss event, decline more than 2% over longer than five consecutive business days, or decline over multiple stop loss events, the stop loss feature of the Index does not ensure that losses are limited to 2%.

The Performance of the Underlying Indices are Unpredictable: An investment in the ETNs linked to the performance of the Index is subject to risks associated with fluctuations, particularly a decline, in the performance of the Index. Because the performance of the Index is linked to the S&P 500° Total Return Index and the S&P 500 VIX Short-Term Futures<sup>TM</sup> Index TR (which seeks to model the return from a daily rolling long position in the first and second month CBOE Volatility Index® (the "VIX Index") futures contracts) the performance of the Index will depend on many factors including, the level of the S&P 500° Index, the prices of options on the S&P 500° Index, and the level of the VIX Index, which may change unpredictably, affecting the value of futures contracts on the VIX Index and, consequently, the level of the Index. Additional factors that may contribute to fluctuations in the level of the Index include prevailing market prices and forward volatility levels of the U.S. stock markets and the equity securities included in the S&P 500° Index, the prevailing market prices of options on the VIX Index, relevant futures contracts on the VIX Index, or any other financial instruments related to the S&P 500° Index and the VIX Index, interest rates, supply and demand in the listed and over-the-counter equity derivative markets as well as hedging activities in the equity-linked structured product markets.

Market and Volatility Risk: The market value of the ETNs may be influenced by many unpredictable factors and may fluctuate between the date you purchase them and the maturity date or redemption date. You may also sustain a significant loss if you sell your ETNs in the secondary market. Factors that may influence the market value of the ETNs include prevailing market prices of the U.S. stock markets, the index components included in the Index, and prevailing market prices of options on the Index or any other financial instruments related to the Index; supply and demand for the ETNs, including inventory positions with Barclays Capital Inc. or any market maker; the time remaining to the maturity of the ETNs; interest rates; or economic, financial, political, regulatory, geographical or judicial events that affect the level of the underlying Index or other financial instruments related to the Index. These factors interrelate in complex ways, and the effect of one factor on the market value of your ETNs may offset or enhance the effect of another factor.

A Trading Market for the ETNs May Not Develop: Although the ETNs are listed on a U.S. national securities exchange, a trading market for the ETNs may not develop and the liquidity of the ETNs may be limited, as we are not required to maintain any listing of the ETNs.

No Interest Payments from the ETNs: You may not receive any interest payments on the ETNs.

Restrictions on the Minimum Number of ETNs and Date Restrictions for Redemptions: You must redeem at least 25,000 ETNs at one time in order to exercise your right to redeem your ETNs on an optional redemption date. You may only redeem your ETNs on an optional redemption date if we receive a notice of redemption from you by certain dates and times as set for in the pricing supplement.

Uncertain Tax Treatment: Significant aspects of the tax treatment of the ETNs are uncertain. You should consult your own tax advisor about your own tax situation.

Barclays Bank PLC has filed a registration statement (including a prospectus) with the SEC for the offering to which this communication relates. Before you invest, you should read the prospectus and other documents Barclays Bank PLC has filed with the SEC for more complete information about the issuer and this offering. You may get these documents for free by visiting etn.barclays.com or EDGAR on the SEC website at www.sec.gov. Alternatively, Barclays Bank PLC will arrange for Barclays Capital Inc. to send you the prospectus if you request it by calling toll-free 1-877-764-7284, or you may request a copy from any other dealer participating in the offering.

The ETNs may be sold during regular trading hours on the applicable exchange through any brokerage account. Commissions may apply and there are tax consequences in the event of sale, redemption or maturity of the ETNs. Sales in the secondary market may result in significant losses.
